Summary

Risk & Data Scientist specializing in credit-risk modeling, Credit Decision Engine (CDE) rule architecture, and high-throughput portfolio analytics in Indonesia's multi-finance industry. Experienced in end-to-end credit scorecard development (XGBoost, LightGBM, Logistic Regression), GoRules/Zen decision tables, and columnar data pipelines (Python, Polars, DuckDB, Parquet, SQL Server).

Skills

Risk & Modeling: Credit Scoring, Scorecard Segmentation, AUC-ROC, Gini, KS Statistic, Temporal Validation, Feature Engineering, XGBoost, LightGBM, scikit-learn, Optuna

Data & Analytics: Python, SQL Server, Polars, pandas, DuckDB, Apache Parquet, Google BigQuery, Excel/VBA, Vintage & Roll-Rate Analysis

Decision Systems & Engineering: GoRules Zen Engine, JSON Decision Model (JDM), FastAPI, Pydantic, pytest, n8n, Next.js, TypeScript, Cloudflare Workers

Experience

Risk Development Staff, PT Smart Multi Finance – Jakarta, Indonesia — Sept 2025 – present

- Developed and evaluated credit-scoring models across tens of thousands of credit contracts and dozens of candidate risk features with robust holdout discrimination power (evaluated via ROC-AUC, Gini, and KS statistics), enforcing strict application-time feature availability and leakage controls.
- Designed, tested, and maintained Credit Decision Engine (CDE) rule tables in GoRules/Zen for automated credit approval, manual review routing, and policy rejection with deterministic reason codes.
- Built reproducible monthly portfolio-risk and Vintage/Roll-Rate reporting pipelines using Python, Polars, Parquet, DuckDB, and Excel/VBA with contract-level identifier and mapping reconciliation.
- Developing an agreement-level repeat-order propensity workflow with temporal out-of-time validation and risk-tier segmentation; collaborating with IT and business teams to resolve production scoring discrepancies.

Projects

Credit Scoring ML & Risk Modeling — 2025 – 2026

- Benchmarked Logistic Regression, Random Forest, XGBoost, and LightGBM with Optuna tuning, KS/Gini decile separation analysis, and FastAPI technical handoff specifications.

Credit Decision Engine (GoRules/Zen) — 2025 – 2026

- Translated multi-finance underwriting matrices into modular JSON Decision Models (JDM) with boundary regression testing and payload contract validation.

Portfolio Risk & Reporting Automation — 2026

- Engineered a staged Parquet and DuckDB analytical pipeline feeding automated Excel/VBA reporting workbooks with mapping-coverage and conflict-flag audits.

Indonesian Document OCR (KTP & KK) — 2026

- Built an automated identity extraction and field-validation pipeline for Indonesian KTP and Kartu Keluarga documents with confidence-based human review routing.

Koii & KasMate Web Applications — 2026

- Designed and shipped full-stack progressive web applications on Cloudflare Pages & Workers for shared couple workspaces (Koii) and AI-assisted personal finance tracking (KasMate).

Certifications

Deep Learning & AI: Advanced Deep Learning for LLM (Batch 5) — rubythalib.ai Academy (2026); Mini Bootcamp AI Agent & Automation — Belajarlagi (2026)

Data & Machine Learning: Machine Learning Professional Certification & Data Engineering Professional Certification — RapidMiner (2022 – 2023)

Education

University of Technology Yogyakarta, B.S. in Informatics – Yogyakarta, Indonesia — Sept 2020 – Aug 2024

- GPA: 3.32 / 4.00 — Focus on Machine Learning, Data Engineering, and Software Systems
